25 Minor Pentatonic Licks for Blues Guitar

Introduction

All examples in this book are available as free audio downloads from www.fundamental-changes.com

If you would like a high resolution pdf of this book for free, please email your sales receipt to the address at the end of this book.

This book contains 25 new and original minor pentatonic blues guitar licks. There are 5 licks for each of the 5 minor pentatonic scale shapes shown below.

Each lick has a corresponding audio example which is available for **free download** (no strings attached!) from www.fundamental-changes.com just click on the ‘downloads’ link. Also included are 3, high quality backing tracks at different speeds to get you playing as soon as possible.

Also in this book there is a section on how to practice these lines so they naturally incorporate into your playing.

This book came out of a need to develop great blues playing in many of my 40+ weekly private guitar students. Every line in this book has been tried and tested on private students who pay many multiples of the cost of this book. It’s all ‘good stuff’ and every line contained in these pages will teach you something about a different area of the guitar whilst giving you

some great lines to play.

If you like this book, please write a quick review!

If you don't already know them, here are the 5 shapes of the minor pentatonic scale in the key of A. To learn them, play and visualise the chord (red dots) and then play through the scale.

SHAPE 5

*This book is a short sample of the longer work, **The CAGED System and 100 Licks for Blues Guitar**, which delves deeply into the CAGED system and teaches you vocabulary for all over your guitar neck. The 106 page volume is available on Amazon as a paperback or Kindle Download.*

It covers Major and Minor Pentatonic scales, The Blues Scale and The Mixolydian Mode.

The first two chapters are included as a free gift at the end of this book.

Chapter 1 - Minor Pentatonic Licks in 5 Shapes

We all need to start somewhere with our musical vocabulary, and just as we learned to talk by copying our parents, we learn to play by copying the people we like to listen to.

We will look at 5 Pentatonic licks for each positional shape, remember *visualise* each chord shape from the introduction on the neck as you use these lines.

*****Blues licks are difficult to write/read accurately in notation and tab. Listen and sync your playing to the audio examples to get an idea of the actual phrasing and nuance.*****

Practice these ideas by first learning an individual idea, and then playing it over **Backing Track One: Slow Blues in A Minor**. Try learning one line from each shape first, rather than learning five lines in one position.

Take it in turns to play one lick in each position ascending the guitar neck. When you can do that move on to learning a new line from each shape and repeat the exercise.

Don't be too strict with yourself about rhythm and phrasing at this stage. We're just learning to move positions.

In chapter 2 we will discuss some very useful ways to practice these lines and how to use them to be creative in your own soloing.

This book is a short sample of the longer work, **The CAGED System and 100 Licks for Blues Guitar**, which delves deeply into the CAGED system and teaches you vocabulary for all over your guitar neck. The 106 page volume is available on Amazon as a paperback or Kindle Download.

Figure and audio example 1.1b

Figure and audio example 1.1b shows a musical score for a piano and a tuba. The piano part is in treble clef, 12/8 time, and the tuba part is in bass clef, 12/8 time. The piano part features a melody with a wavy line indicating a tremolo or vibrato effect. The tuba part features a bass line with fingerings (8, 5, 7) and a 'FULL' marking indicating a full attack or breath mark.

Figure and audio example 1.1c

Figure and audio example 1.1c shows a musical score for a piano and a tuba. The piano part is in treble clef, 12/8 time, and the tuba part is in bass clef, 12/8 time. The piano part features a melody with a wavy line indicating a tremolo or vibrato effect. The tuba part features a bass line with fingerings (7, 5, 7, 5, 7, 5, 7) and a 'FULL' marking indicating a full attack or breath mark.

Figure and audio example 1.1d

Figure and audio example 1.1e

The musical score for 'The Rose Tree' is presented in two systems. The first system contains the first two measures of the piece. The second system contains the next two measures. The notation includes a treble clef, a key signature of one sharp (F#), and a time signature of 12/8. The melody is written in the treble staff, and the bass line is written in the bass staff. The bass line includes a 'T' (Tenor) and 'B' (Bass) clef. The piece is in 12/8 time, with a tempo marking of 'Moderato'. The score is for a single voice and piano accompaniment.

Minor Pentatonic Shape 2 Licks

Minor Pentatonic Shape 3 Licks

Here are 5 lines built around Shape 3. They are all played as audio examples.

Figure and audio example 1.3a

The first system of the musical score for 'The Wind' consists of two staves. The top staff is in treble clef with a key signature of one sharp (F#) and a 12/8 time signature. It contains a melody of eighth notes, some beamed together, and a final half note with a wavy line above it. The bottom staff is in bass clef with the same key signature and time signature. It contains a bass line with notes 13, 10, 12, 13, 10, 13, 10, and 10, with various annotations like '1/2', 'PULL', and '1/2' above it, and a wavy line at the end.

Figure and audio example 1.3b

Figure and audio example 1.3c

The musical score for 'The Rose Tree' is presented in three systems. The first system shows the vocal melody in G major, 12/8 time, with a treble clef and a key signature of one sharp (F#). The melody consists of eighth and quarter notes, ending with a half note. The second system shows the guitar accompaniment in standard tuning (E, A, D, G, B, E), with a treble clef and a key signature of one sharp. The guitar part features a 12/8 time signature and a sequence of fret numbers (12, 13, 12, 9, 10, 12, 9, 12, 9, 10, 12, 10, 12, 12, 12) indicating a specific fretting pattern. The third system shows the guitar accompaniment in standard tuning, with a treble clef and a key signature of one sharp. The guitar part features a 12/8 time signature and a sequence of fret numbers (12, 10, 12, 12, 12) indicating a specific fretting pattern.

Minor Pentatonic Shape 4 Licks

Here are 5 lines built around Shape 4. They are all played as audio examples.

Figure and audio example 1.4a

Figure and audio example 1.4b

Figure and audio example 1.4c

Figure and audio example 1.4d is a musical score in 12/8 time. The treble staff is marked with a key signature of one sharp (F#) and a tempo of 8va. The bass staff is marked with a key signature of one flat (Bb) and a tempo of FULL. The score consists of two measures. The first measure contains a sequence of eighth notes and quarter notes, with fingerings 2, 4, and 4 indicated. The second measure contains a sequence of eighth notes and quarter notes, with fingerings 15, 12, 15, 14, 13, and 13 indicated. The score ends with a double bar line.

Figure and audio example 1.4d

Figure and audio example 1.4e is a musical score in 12/8 time. The treble staff is marked with a key signature of one sharp (F#) and a tempo of 8va. The bass staff is marked with a key signature of one flat (Bb) and a tempo of 2. The score consists of two measures. The first measure contains a sequence of eighth notes and quarter notes, with fingerings 14, 14, 14, 14, 12-14, and 15 indicated. The second measure contains a sequence of eighth notes and quarter notes, with fingerings 13, 13, 14, and 14 indicated. The score ends with a double bar line.

Chapter 2 - How to Practice

Now we have specific vocabulary that plays to the strengths of each individual shape, we can look at ways to incorporate the licks into your own solos and make them your own.

There is great debate on the subject of *licks* versus *spontaneous improvisation*, however I think a good solo is a combination of both approaches.

When you first learned to speak you copied the odd word from your parents, gradually you put them into sentences and now you don't even think about how to talk. Your own ideas just come out as you desire them to. However if you hadn't gone through that phase of 'using your parents' licks', you'd have never developed the ability to speak at all.

The following system is a fantastic way to make your licks sound natural and to also help incorporate new vocabulary into your playing, thus making it sound your own. It will also teach you to organically develop an idea in a truly musical way.

In the first exercise I want you to focus on just one line, let's try this one from **figure and audio example 1.1a**

As you can see, this is a 2 bar lick.

We will play this idea over the space of 4 bars. The first 2 bars will be the lick; the second 2 bars will be an *improvised* answering phrase. **Figure and audio example 2a** shows how:

Start by putting on **Backing Track 1: Slow Blues in A Minor** and be careful to focus on the exercise. Don't let yourself start noodling around the scales. Be sure to stick to 2 bars of the lick, then 2 bars or your improvised answering phrase.

Don't worry for now about the *quality* of the improvised line you play, but imagine that the lick in the first half is a **question** and you're playing an **answer**. There are a billion possibilities.

When you're comfortable with that, move on to your other lines in the key of A. Try it with each lick in each of the 5 positions. Remember, it's easy to lose focus and start wandering, but keep pulling yourself back to the exercise.

The second exercise we will try is to reverse exercise **2a**. Start with 2 bars of improvisation and try to seamlessly blend that into a lick that you learned in chapter 1. **Figure and audio example 2b** shows you how:

-----IMPROVISE-----

-----LICK-----

BEGIN WITH YOUR OWN IDEA HERE.....

RESOLVE IT WITH A LICK HERE.....

Again, try this with each lick in the 5 positions.

Finally and most importantly, Look at **figure and audio example 2c**:

---IMPROVISE---

LICK

---IMPROVISE---

BEGIN WITH A SHORT IDEA....

.....MERGE IT INTO A LICK FOR 2 BARS.....

...RESOLVE IT HERE...

As you can see, in this example we begin with a short piece of improvisation, merge it into a phrase we know and then resolve it with more improvisation.

Once you have done this with all the licks in chapter 1 you should be well on your way to playing a convincing blues solo.

*****Warning! – Don't be too strict with yourself about playing the licks perfectly. Blues is all about phrasing and improvisation. There is no *right* way to play any one lick so it's better to focus on a smooth, natural sounding line than waste time trying to get your lines to sound exactly like mine. I give you permission to change my lines as much as you like!*****

Have fun!

This book is a short sample of the longer work, **The CAGED System and 100 Licks for Blues Guitar**, which delves deeply into the CAGED system and teaches you vocabulary for all over your guitar neck. The 106 page volume is available on Amazon as a paperback or Kindle Download.

It covers Major and Minor Pentatonic scales, The Blues Scale and The Mixolydian Mode

It is available here on [Amazon US](#)

The CAGED System and 100 Licks for Blues Guitar

- 100 Top Quality Blues Licks-**
- Complete Method to Learn the Guitar Neck-**
- Over 1 Hour of Live Examples and Audio for FREE Download-**

Whether you want a *complete method to learn blues guitar* or just a set of *100 excellent blues guitar licks*, this book has you covered.

Most guitarists stay locked into the same patterns and scale shapes for years, unable to break out of the habits and licks they first learnt as a beginner. This leads to creative stagnation,

boring solos and a sense that something will always be missing from their playing.

Ask yourself this: - When you solo do you normally go straight to your first pentatonic box shape?

- **Do you normally play in a limited range of ‘easy’ keys, like A, E, G and C?**
- **Would you like to have complete *freedom to visualize and play in any key, in any position on guitar?***
- **Do you only use minor pentatonic scales, or rarely use *rich sounding modes* to enliven your playing?**

If the answer to any of the above questions is *yes* then this book is for you.

This book helps you spread out your playing all over the guitar neck. It frees you from playing the same ideas over and over again. This book *spurs creativity by opening up the neck* and most importantly, it teaches you an *incredibly strong visual method* to ‘hang’ scales and licks off 5 easy to remember chord shapes.

The CAGED System for Blues Guitar covers both *Major and Minor Pentatonic Scales, The Blues Scale* and *The Mixolydian Mode*. With 25 licks for each scale covering all 5 positions, you’ll never be short of something interesting to say on your instrument.

This isn't a book just about scales. There are *over 100 blues guitar licks* in different styles that you will memorise easily, and can form the basis of new, improved solos. You'll learn to hang these off each chord shape, so wherever you are on the guitar you'll never lose the groove.

This is the method taught at the London College of Music's Guitar Institute, and I'm very happy to share these powerful concepts with you.

Fundamental Changes in Jazz Guitar

- 20 Lessons –
- Over 2hrs of Audio -
- 163 Live Examples played at 2 speeds -
- Standard Notation and Tablature -
- 6 Backing Tracks -

The COMPLETE Jazz Guitar Soloing Course.

[Buy Now in Paperback or for Kindle/iPad/PC or Smartphone](#)

Containing over 2 hours of audio examples and backing tracks, Fundamental Changes on guitar is a logical, in-depth soloing study of the important major ii V I (2 5 1) in jazz.

Aimed at the intermediate guitarist or first time jazz soloist, this important and comprehensive work takes the student from first principles right through to advanced substitutions and extensions that can be played over each chord of the progression.

The focus of the book is on playing, rather than theory and whilst there is often a brief explanation of the necessary concepts involved, each of the 20 chapters emphasises playing and creating music.

The book contains over 162 individual, notated musical examples in tablature and standard notation. Each musical example has a corresponding audio file and they are all available for free download from a dedicated website. There are also 6 backing tracks for the student to practice all the jazz lines they are learning to construct.

15 Essential Guitar Lessons for Beginners

Written by a professional, full time guitar teacher, 15 Essential Guitar Lessons for Beginners, teaches you to play the right way from the first time you pick up the instrument.

"The most common scenario I come across as a guitar teacher is the adult who is self-taught with bad habits: Things that should be sorted out on day one and have been left unchecked for years have developed into brick walls stopping any progress.

These fundamental problems need to be sorted out before the student can improve and sadly it takes a long time to un-learn and re-train an ingrained habit. I wrote this book to try to help people get things right, right from the start".

This isn't a theory book; it's not all about posture or technique. It's about getting the simple, essential things right, whilst quickly building the important skills you need to play the guitar. The in depth chapters cover:

The Important Things You Should Know
First Chords and Changes
Holding the Plectrum (Pick)
More Common Chord Changes
Strumming Part One
Changing Chords Whilst Strumming
New Chord Progressions to Practice
More Interesting Rhythms
Splitting the Chord
Descending Bass Lines
Fragments of Songs
Reading Guitar Tablature
Finger Picking Patterns
Further Study
Dictionary of Useful Chords

It's all about playing and learning music whilst keeping in mind the foundational techniques that will allow you to continue to grow as a guitarist, long into the future.

As a bonus, there is a comprehensive Chord Dictionary to help you with the first chords you will come across as a beginner.

Bonus Chapters from The CAGED System and 100 Licks for Blues Guitar

Chapter 1 - What is the CAGED System?

The guitar is unique amongst instruments in that it isn't linear. Imagine a keyboard; the notes go in one direction and there is only one way to play each pitch. When you compare that with the guitar, you will notice that we have more than one way to play most pitches, and that the notes move both horizontally *and* vertically across the neck.

What we need is a simple way to make sense of all this information; a way to organise the neck into convenient chunks to remove confusion and help us venture into areas that we might not be confident to explore.

The more of the neck we know, the more creative, expressive and musical we can be, and the more satisfied with our playing we will feel.

This is where the CAGED system comes in.

The CAGED system divides the guitar neck into manageable chunks based around five different chord shapes - the chord shape of C, the chord shape of A, and the chord shapes of G, E and D.

Look at these *barre* chord shapes. See if you recognise the open position chords that you probably learned as a beginner. The square dots are the *root* notes and each chord has been shown here as a voicing of **A Major**:

We use these chord shapes to divide up the neck when we solo. What you are going to learn is how to *hang* scale shapes and licks off each chord shape. This does take time, but it will

never leave you.

It's like 'Seeing the Matrix'

Using each of these shapes we can section off the neck; one shape for one position.

For the moment, let us work in one key, the key of A. Here are all the chords above shown as different *voicings* of an A Major chord spread out on the neck.

At first glance this may look confusing, but look again carefully. Can you see all the barre chord shapes from the previous page on the neck diagram above? Use the square root notes to help you orientate yourself.

Why is this important?

This concept is vital to our ability to solo in any position. For example, if I'm in the key of A Major and my left hand is located in the 9th-12th fret area, I will be visualising the 'C' Shape. If I want to play in the 3rd to 5th fret range, I see a 'G' Shape. I have many licks and lines in my head that I visualise around each chord shape so wherever I am on the guitar, I always have something to play!

The real trick to all this is being able to see clearly all the *root* notes for the key we are playing in. *Root notes* in this book will always be shown as a square dot in any diagram.

You should now understand that

- **We have 5 chord shapes which separate the neck into 5 individual areas.**
- **We use these shapes as visual aid to help us navigate around the fretboard.**
- **We will learn our scales and licks in conjunction with each chord shape.**
- **When we visualise each chord on the neck, we will immediately have the vocabulary to play in each position.**

That is the beauty of the CAGED system. In the next chapter we will learn to 'hang' scales off each chord shape so that when you see the chord shape, you see all the licks you know.

The chords I have shown above are all, for the moment, major chords. We would visualise

them if we were playing major scales and licks:

- **If we are soloing with major scales, we use major chords.**
- **If we are soloing using minor scales, we use minor chords.**
- **If we are soloing with dominant 7 scales, we use dominant 7 chords.**

Chapter 2 - The CAGED System with Minor Pentatonic Scales.

In chapter 1, we looked at how we can use *Major* Chord Shapes to divide up the neck in the key of A Major. We will be coming back to those shapes in chapter 12 when we look at the major pentatonic scale.

For now, we are going to focus on the *Minor* pentatonic scale as you may already have a grasp of one or two of the common shapes on the neck.

We will begin by learning your visual cues: the chord shapes that we will learn to associate with each scale shape. Remember, we section off the neck with chord shapes, and then mentally ‘hang’ each scale shape from each chord.

As we are learning the *minor* pentatonic scale, we will learn 5 *minor* 7 chord shapes to divide up the neck. Here are your 5 shapes, all in the key of A minor:

* Shape 5 is actually an Am11 chord but this helps to clarify the differences between shape 1 and shape 5.

You will notice also that we have stopped calling these chords C shape, A shape etc. Now

they are just named shape 1, shape 2 and so forth.

Exercise 1.

- Memorise these chords.
- Play through them individually, taking care to note the fret numbers on the left. Actually say “A Minor 7 Shape *x*” as you play each voicing.
- Learn them ascending the neck as shown in **figure and audio example 2a**.
-

AM7 SHAPES: 5 INVERSIONS LOW - HIGH

- Learn them descending the neck as shown in **figure and audio example 2b**.

AM7 SHAPES: 5 INVERSIONS HIGH - LOW

This musical notation shows five inversions of the A minor 7th (AM7) chord, arranged from highest to lowest position. The top staff is in treble clef, and the bottom staff is in bass clef. The chords are represented by whole notes with fingerings indicated by numbers 1-4. The bottom staff also includes fret numbers for each chord.

Chord Inversion	Treble Clef Fingering	Bass Clef Fingering	Bass Clef Fret
1st Inversion (High)	1 2 3 4	1 2 3 4	15
2nd Inversion	1 2 3 4	1 2 3 4	17
3rd Inversion	1 2 3 4	1 2 3 4	17
4th Inversion	1 2 3 4	1 2 3 4	17
5th Inversion (Low)	1 2 3 4	1 2 3 4	5

- Play them in alternating positions like in **figure and audio example 2c**.

AM7 SHAPES: 5 INVERSIONS ALTERNATING

This musical notation shows five inversions of the A minor 7th (AM7) chord, arranged in alternating positions. The top staff is in treble clef, and the bottom staff is in bass clef. The chords are represented by whole notes with fingerings indicated by numbers 1-4. The bottom staff also includes fret numbers for each chord.

Chord Inversion	Treble Clef Fingering	Bass Clef Fingering	Bass Clef Fret
1st Inversion (High)	1 2 3 4	1 2 3 4	15
2nd Inversion	1 2 3 4	1 2 3 4	17
3rd Inversion	1 2 3 4	1 2 3 4	17
4th Inversion	1 2 3 4	1 2 3 4	17
5th Inversion (Low)	1 2 3 4	1 2 3 4	5

Now you have memorised these 5 important chord voicings, it is time to learn the minor pentatonic scales that fit around each shape.

To begin with, let's focus in on shape 1.

Here is the chord diagram once again, and next to it, I have shown how A minor pentatonic *hangs* from the chord shape:

It is clear in the above diagrams how the A Minor pentatonic Shape 1, fits in and around the chord of Am7.

- The red dots show notes that are in the chord and scale.
- The blue dots show scale tones.
- The square dots are the roots of the chord/scale (in this case, 'A').

Exercise 2.

To develop the visual links between the chord and scale shape, play through **figure and audio example 2d**:

AM7 SHAPE 1 A MINOR PENTATONIC AM7 SHAPE 1

The diagram illustrates the A Minor Pentatonic Scale on a guitar fretboard. The top staff shows the scale in treble clef, starting on the 5th string, 5th fret (A) and ending on the 5th string, 5th fret (A). The bottom staff shows the fretboard with fingerings for the scale. The scale is labeled 'A MINOR PENTATONIC' and 'AM7 SHAPE 1'.

SHAPE 3

SHAPE 3

SHAPE 4

SHAPE 4

As you learn each shape above, in your mind's eye visualise the red dots on your guitar neck. Your ability to do this will improve quickly with practice.

Figure and audio example 2e teaches you to practice the other scale positions, just like we did with shape 1.

AM7 SHAPE 2

AM7 SHAPE 2

A MINOR PENTATONIC

7 8-10 7-10 7-10 7-9 8-10 8-10 10-8 10-8 9-7 10-7 10-7 10-8

AM7 SHAPE 3

AM7 SHAPE 3

A MINOR PENTATONIC

10-12 10-12 10-12 9-12 10-13 10-12 12-10 13-10 12-9 12-10 12-10 12-10

AM7 SHAPE 4

AM7 SHAPE 4

A MINOR PENTATONIC

8^{va}-----

12-15 12-14 12-14 13-15 12-15 15-12 13-12 14-12 14-12 14-12 15-12

AM7 SHAPE 5

AM7 SHAPE 5

A MINOR PENTATONIC

8^{va}-----

15-17 15-17 14-17 14-17 15-17 15-17 17-15 17-15 17-14 17-14 17-15 17-15

Look at **figure and audio example 2e**. Notice that each time you play through the scale, you *begin from the lowest note in each position*. Do not just start from the root.

The sequence is

- Play and say the chord.
- Play through the scale ascending and descending.
- Play and say the chord.

Once you have become reasonably confident with this, start to play through each position but with the scale *descending and then ascending*.

I have shown this idea with Shape 3 in **figure and audio example 2f**:

AM7 SHAPE 3

The figure displays a musical exercise for the Am7 chord, labeled 'SHAPE 3'. The top staff is a treble clef with a key signature of one flat (Bb) and a time signature of 8/8. It contains a scale sequence starting on Bb4, ascending to G5, and then descending back to Bb4. The bottom staff is a fretboard diagram for a guitar, showing the first five frets. The strings are labeled T (Treble), A (Acoustic), and B (Bass). The fret numbers are: T (13, 12, 10, 9, 8), A (12, 10, 9, 8, 7), B (12, 10, 9, 8, 7). The sequence of fret numbers for the scale is: 12-10, 13-10, 12-9, 12-10, 12-10, 12-10, 10-12, 10-12, 10-12, 9-12, 10-13, 10-12.

Repeat this for all 5 positions.

Once you have got that under your fingers, try **figure and audio example 2g**: this *monster*

exercise links everything together.

A MINOR PENTATONIC 5 POSITIONS

First system of musical notation for the A minor pentatonic scale in first position. The treble clef staff shows the scale ascending and descending. The bass clef staff shows the fret numbers for each note: 5, 8, 5, 7, 5, 7, 5, 8, 5, 8, 8, 5, 8, 5, 7, 5, 7, 5, 8, 5.

Second system of musical notation for the A minor pentatonic scale in second position. The treble clef staff shows the scale ascending and descending. The bass clef staff shows the fret numbers for each note: 8, 10, 7, 10, 7, 10, 7, 9, 8, 10, 8, 10, 10, 8, 10, 8, 9, 7, 10, 7, 10, 7, 10, 8.

Third system of musical notation for the A minor pentatonic scale in third position. The treble clef staff shows the scale ascending and descending. The bass clef staff shows the fret numbers for each note: 10, 12, 10, 12, 10, 12, 9, 12, 10, 13, 10, 12, 12, 10, 13, 10, 12, 9, 12, 10, 12, 10, 12, 10.

Fourth system of musical notation for the A minor pentatonic scale in fourth position. The treble clef staff shows the scale ascending and descending. The bass clef staff shows the fret numbers for each note: 12, 15, 12, 14, 12, 14, 12, 14, 13, 15, 12, 15, 15, 12, 13, 12, 14, 12, 14, 12, 14, 12, 15, 12.

Fifth system of musical notation for the A minor pentatonic scale in fifth position. The treble clef staff shows the scale ascending and descending. The bass clef staff shows the fret numbers for each note: 15, 17, 15, 17, 14, 17, 14, 17, 15, 17, 15, 17, 17, 15, 17, 15, 17, 14, 17, 14, 17, 15, 17, 15.

Do the previous exercise with descending scales.

Finally, Practice this exercise by ascending one shape and then descending the next like in **figure and audio example 2h:**

A MINOR PENTATONIC 5 POSITIONS ASCEND THEN DESCEND

First system of musical notation for the A minor pentatonic scale, positions 1 and 2. The top staff shows the melody in treble clef. The bottom staff shows the fretboard with fingerings for the thumb (T), index (A), and middle (S) fingers. The sequence of frets is: 5-8, 5-7, 5-7, 5-7, 5-8, 5-8, 10-8, 10-8, 9-7, 10-7, 10-7, 10-8.

Second system of musical notation for the A minor pentatonic scale, positions 3 and 4. The top staff shows the melody in treble clef. The bottom staff shows the fretboard with fingerings for the thumb (T), index (A), and middle (S) fingers. The sequence of frets is: 10-12, 10-12, 10-12, 9-12, 10-13, 10-12, 15-12, 13-12, 14-12, 14-12, 14-12, 15-12.

Third system of musical notation for the A minor pentatonic scale, positions 5 and 6. The top staff shows the melody in treble clef. The bottom staff shows the fretboard with fingerings for the thumb (T), index (A), and middle (S) fingers. The sequence of frets is: 15-17, 15-17, 14-17, 14-17, 15-17, 15-17.

To make sure you're playing these exercises correctly, practice them with the corresponding audio examples playing in the background. Try to sync in with the recorded guitar. When you feel confident, speed them up with a metronome.

Memorising anything can take a while. Spend time on this chapter as it forms the basis of everything we will do in the rest of this book.

In the next chapter we will start to develop your blues guitar vocabulary by teaching you musical licks and phrases for each shape.
